Introduction

Welcome to the **Pharmacy POS System User Manual**.

This manual is designed to help pharmacy staff, including cashiers, managers, and administrators, effectively use the Pharmacy Billing and Inventory Management System. Developed to meet the specific needs of modern pharmacies, this system enhances operational efficiency, ensures accuracy in billing and inventory, and supports informed decision-making through robust reporting features.

In today's fast-paced pharmaceutical environment, managing sales, stock, and supplier interactions with precision is crucial. Our POS system provides a secure, user-friendly interface to handle day-to-day pharmacy operations — from generating invoices and recording stock entries to managing products and generating insightful reports.

Whether you're processing a sale at the counter or reviewing inventory trends as an administrator, this manual offers step-by-step guidance to navigate the system's features confidently and efficiently.

Who Should Use This Manual

- **Cashiers** handling billing and daily sales operations
- **Pharmacy Managers** overseeing stock, pricing, and supplier coordination
- **System Administrators** managing configurations, and reports

By following this guide, users will be able to:

- Log in and operate the cashier and admin panels
- Generate invoices
- Manage products, suppliers, and inventory through GRNs
- View and export detailed reports for audits and performance review

Let's begin with an overview of how to get started.

Getting Started

Before using the Pharmacy POS System, it's important to understand how to access the platform and navigate the interface. This section covers system access, user roles, login procedures, and basic navigation for both the **Cashier Panel** and **Admin Panel**.

1. System Access Requirements

To use the Pharmacy POS System, you'll need:

- A desktop or laptop computer with Windows OS
- Java Runtime Environment (JRE) installed
- User credentials (provided by the system administrator)

2. User Roles and Permissions

There are two main types of users in the system:

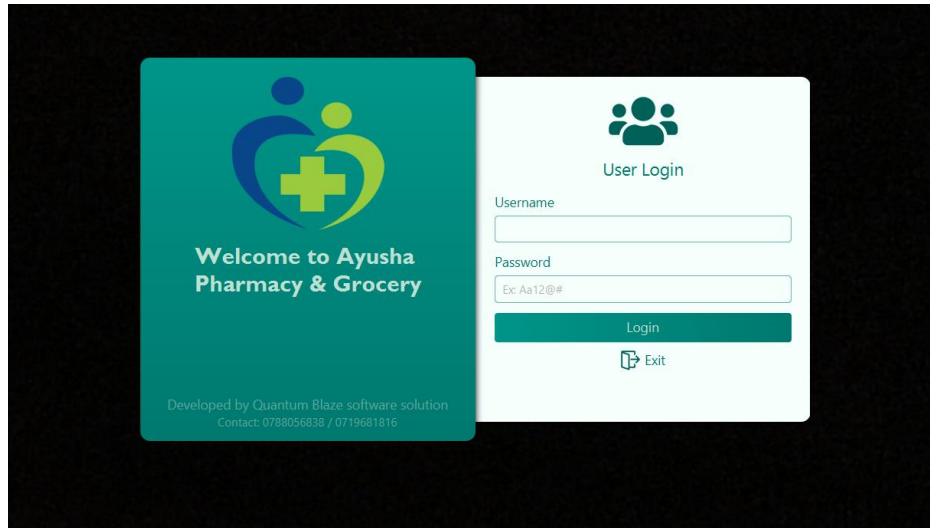

Role	Access Level
Cashier	Invoice generation, session start (login, petty cash), daily sales
Admin/Manager	Full access including product management, GRN, discounts, suppliers, and reports

3. Launching the Application

1. **Double-click** the Pharmacy POS System shortcut on your desktop.
2. Wait for the application to initialize. You'll see the **login screen**.

4. Log In Page

This is the main login screen for the Pharmacy POS system. Both cashiers and admin users use this screen to access their respective panels.

4.1. Elements Explained:

Username Field: Input the registered username of the cashier or admin.

Password Field: Input the secure password associated with the user account.

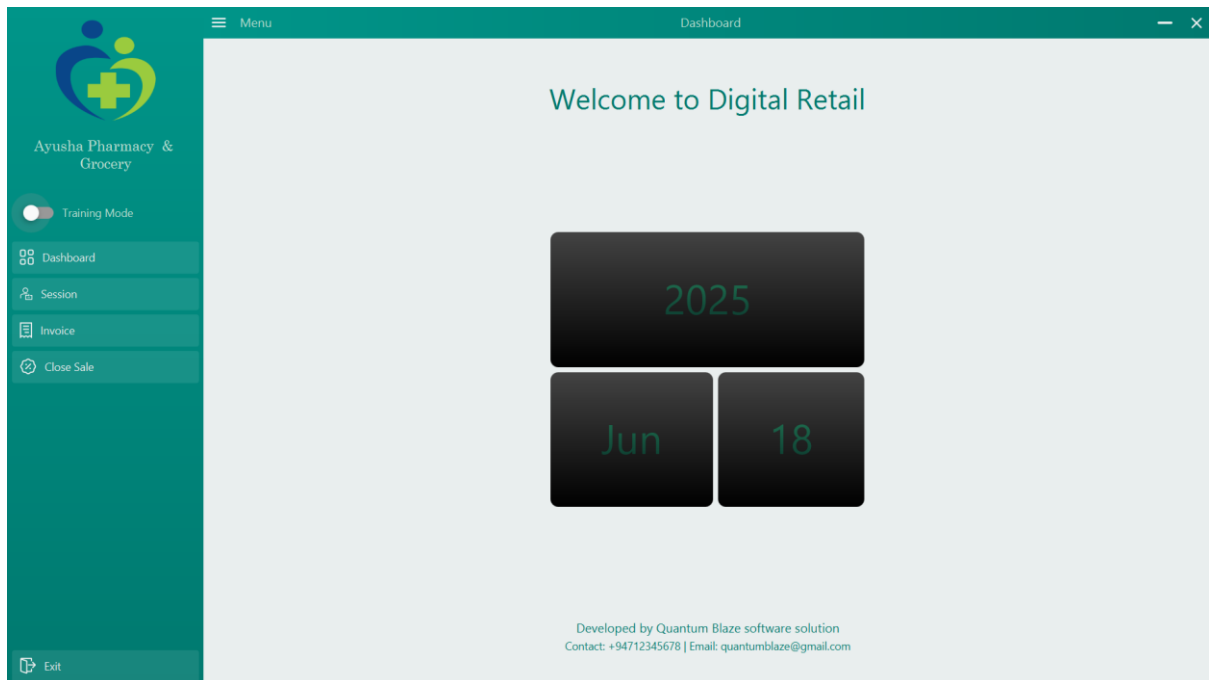

Login Button: After entering credentials, click this button to access the system.

- *If you enter valid cashier credentials, the system redirects to the **Cashier Panel**.*
- *If you enter valid admin credentials, the system opens the **Admin Panel**.*

⚠ Make sure the username and password match exactly with the registered data. Incorrect credentials will show an error message like “Invalid Login Credentials”.

5. Cashier Dashboard

This is the cashier dashboard of this system.

After coming to the dashboard, perform all the other processes. First, you need to go to the session page and start the session. For that, you need to switch to the session page.

6. Session

Session Start Panel: Enter petty cash at the beginning of a shift.

Session End Panel: Enter total cash collected and close the shift.

This dual-purpose screen ensures proper cash tracking and accountability during daily operations.

The screenshot shows the 'Working Session' interface. At the top, a teal header bar contains a 'Menu' icon and the word 'Session'. Below the header, the main area is divided into two columns. The left column is titled 'Waiting for Sign In.' and contains three input fields: 'Username', 'Password', and 'Petty Cash', each followed by a 'Sign In' button. The right column is titled 'Sign OFF is not activated.' and contains three input fields: 'Username', 'Password', and 'Collection', each followed by a 'Sign Off' button. A large digital clock at the top center displays '21 : 04 : PM'. The left sidebar features the Ayusha Pharmacy & Grocery logo, a 'Training Mode' toggle, and a menu with options: Dashboard, Session, Invoice, Close Sale, and Exit. The bottom of the screen displays development information: 'Developed by Quantum Blaze software solution' and contact details.

6.1 Start of Shift – Petty Cash Entry

When the cashier logs in and no session is currently active, the system shows the **session start interface**.

Fields and Actions:

- **Petty Cash Field:**
Input the starting cash in the drawer.
Example: RS.500.00
- **Start Session / Sign in Button:**
Records the session start with a timestamp and petty cash value.
Redirects to the Invoice Page after confirmation.

 Once a session starts, the system prevents further login from the same account on other terminals (to ensure cash is traceable to one cashier).

6.2 End of Shift – Collection and Sign-off

At the end of the shift, when the cashier attempts to click "Sign Off", the system returns to the same screen, now transformed for a close sale.

Additional Fields at Session End:

Total Collection Field:

Cashier enters the actual cash collected (total cash in drawer) at the end of the shift.

End Session / Sign-off Button:

Completes the session.

- Saves the cash report
- Logs cashier out
- Locks terminal for the next user

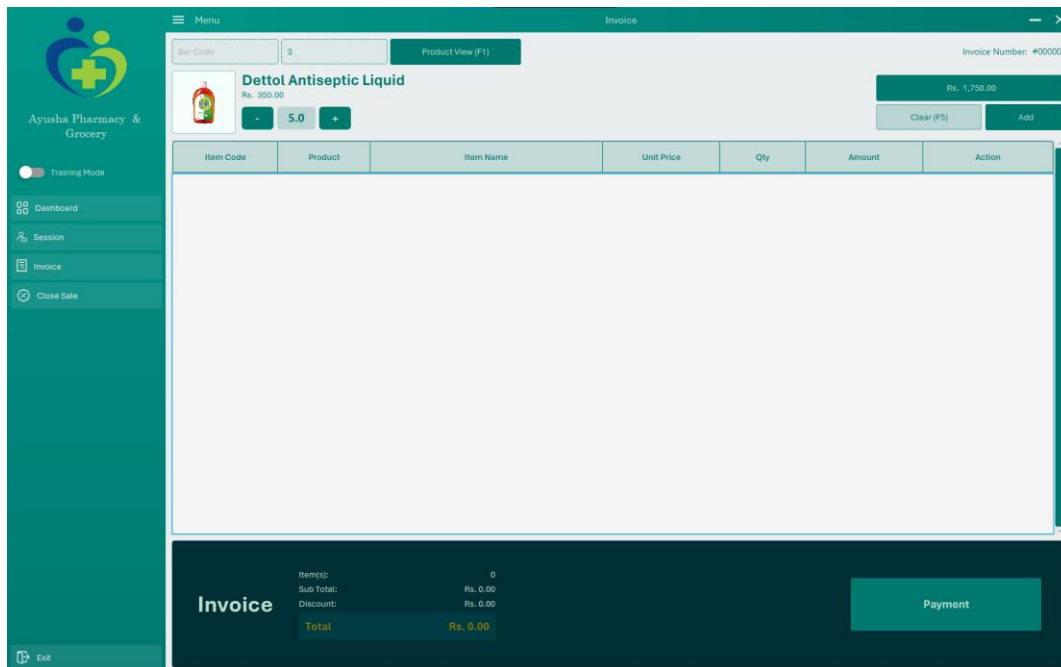

7. Invoice

7.1 Invoice main working screen

Description:

This is the **main working screen** of the **Cashier Panel**, where day-to-day sales are conducted. Here, the cashier can add items to an invoice, collect payments, and print receipts.

The design focuses on speed, accuracy, and ease of use in a fast-paced retail pharmacy environment.

Elements Explained:

7.1.1 Item Entry

Item code / Search Field:

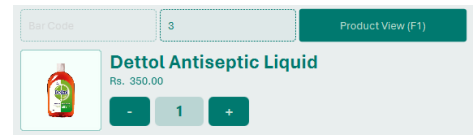

Manually type the product code. Upon selection, the product details are added to the invoice list.

- Double-click any product in the product view (opened via **F1**, **Enter key** or **Product View button**) to retrieve its product code
- Press the **asterisk (*) key** or the **Enter key** after entering a product code to load it into the preview section.

Quantity Field:

Sets how many units of the item are being purchased. Can be updated before adding to the invoice.

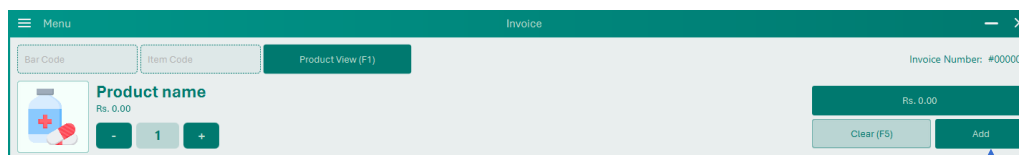

- Press **Plus (+)** or **Minus (-)** to modify item quantity before adding to the invoice.

Add to Invoice Button:

Adds the selected product to the current invoice.

- Press the **Enter Key** or the **Add button** to add an item to the invoice.

7.1.2 Invoice Item List Table

Displays all products added to the current invoice in a structured list.

Columns typically include:

- Product Name
- Quantity
- Unit Price
- Discount (if applied)
- Total (per line item)
- Remove or Edit buttons for each item

Edit Item Button:

Adjust quantity if needed.

Delete Item Button:

Removes the selected item from the invoice.

Item Code	Product	Item Name	Unit Price	Qty	Amount	Action
3		Dettol Antiseptic Liquid	Rs. 350.00	6.0	Rs. 2,100.00	- + X

Invoice

Item(s): 6.0

Sub Total: Rs. 2,100.00

Discount: Rs. 0.00

Total Rs. 2,100.00

Payment (/)

➤ Press **Divide Key** or the **Payment button** to move to the **Payment section**

7.2 Invoice Payment Popup (Cashier Panel – Finalize Payment)

Description:

This is the **final step** in the sales process. After all items are added to the invoice, this **Invoice Payment Popup** appears when the cashier clicks the **"Payment"** button.

This screen allows the cashier to **select the payment method**, **enter amount received**, and **finalize the transaction**.

8. 8. Close Sale Page

Description:

The **Close Sale Page** is used at the **end of a cashier's shift** to summarize the day's cash collection. It allows the cashier to:

- Log out of the POS system
- Enter the number of each currency denomination collected
- Automatically calculate the total cash in hand
- Record **DAY IN** and **DAY OFF** timestamps for audit and reporting
- Ensure transparent cash handover to management or the next shift

Key Components & Field-by-Field Explanation:

8.1. User Authentication

Username / Password Fields:

Required for cashier or supervisor to authorize the closing of the sale session.
Prevents unauthorized logout or manipulation of records.

8.2. Cashier Information

Cashier Name:

Auto-filled with the logged-in cashier's name (e.g., *Vihanga Heshan*)

DAY IN:

Timestamp showing when the cashier started the session
Example: 2025-06-19 09:50 AM

DAY OFF:

Timestamp auto-filled at the moment of session closing
Example: 2025-06-19 04:48 PM

8.3. Cash Denomination Table

This section is for **physically counting** cash in hand and entering **quantities of each note** received during the shift.

5000	2	Rs. 10,000.00
1000	1	Rs. 1,000.00
500	4	Rs. 2,000.00
100	20	Rs. 2,000.00
50		
20		
10		
5		
Collection		Rs. 15,000.00

Collection (Total Cash in Drawer):

As the cashier types in the **quantity** for each denomination, the **amount is auto-calculated** in the adjacent column.

Example: Rs. 15,000.00

This figure should match the system's expected cash balance based on sales.

Close Button:

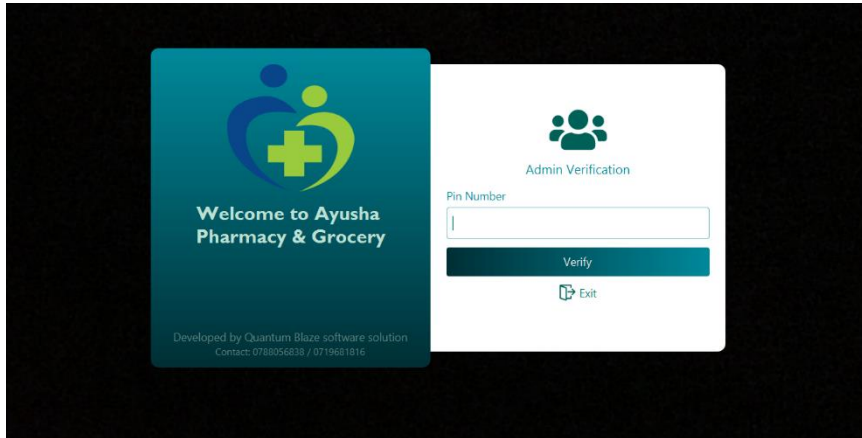

- Finalizes the session
- Locks the cashier account until a new session is started
- Logs the data for audit and report

ADMIN PANEL

9. Admin Verification

Description:

This is the login screen for the admin panel. Only authorized users (admins) can access the back-end system through this page.

Elements Explained:

Password

Secure field to input the password (characters are hidden).

Verify Button

Submits the Verify credentials for verification and grants access if valid.

- *You can go to the Dashboard by adding the correct verification PIN and pressing the Enter key.*

10. Admin Panel – Dashboard

The Admin Dashboard is the main landing page after a successful admin verification. It provides navigation to all core administrative features of the pharmacy POS system.

It acts as a control panel, giving the admin quick access to manage products, discounts, inventory, suppliers, and reports.

Elements Explained:

10.1 Admin Info

Displays the logged-in admin's name or ID. Confirms identity and provides access to profile or logout (if included in the header).

10.2 Dashboard Navigation Cards or Buttons

- **Product Management:** Navigate to product registration, Product Management, and department management.
- **Discount:** Manage item-specific discounts.
- **Inventory (GRN):** Access the Goods Received Note page for stock entries.
- **Supplier Management:** Register and manage supplier companies and suppliers.
- **Reports:** View reports on sales, GRNs, and current stock balance.

Displays system date and time for reference and audit tracking.

11. Admin Panel – Product Registration

Description:

The **Product Registration** screen is used to register new pharmacy items into the POS system. It allows admins to define key product details such as name, department, cost information, and stock information. This ensures that every item sold is properly tracked in inventory, priced accurately, and can trigger restocking alerts.

The screenshot shows the 'Product Registration' form in the Admin Panel. The form is organized into three main sections: Product Information, Cost Information, and Stock Information. On the left, there is a sidebar menu with options like Dashboard, Product, Product Registration, Product Management, Department Management, Discount, Supply Management, Inventory, and Reports. The top right corner shows the user's name, 'Mitani Wijewardhana'. The form fields include: Product Information (Item Name, Bar Code, Department, Generic Name, Initialize Quantity), Cost Information (Sale Price, Cost Price, Discount), and Stock Information (Unit, Measure, Type, Parent ID). There are also buttons for 'Add Picture', 'Clear', and 'Register'.

Elements Explained:

11.1 Product Information

Product Item Name Field:

Enter the full name of the medicine or product (e.g., *Paracetamol 500mg*).

Department select Field:

Select the relevant department.

11.2 Cost Information

For cost information, you need to add Sales Price, Cost Price, and the discount required to be added to a product.

11.3 Stock Information

For stock information, first select the unit and type the measurement. Then, you must select the product type, either parent or child.

You can add a picture for the product by clicking the **Add Picture** button.

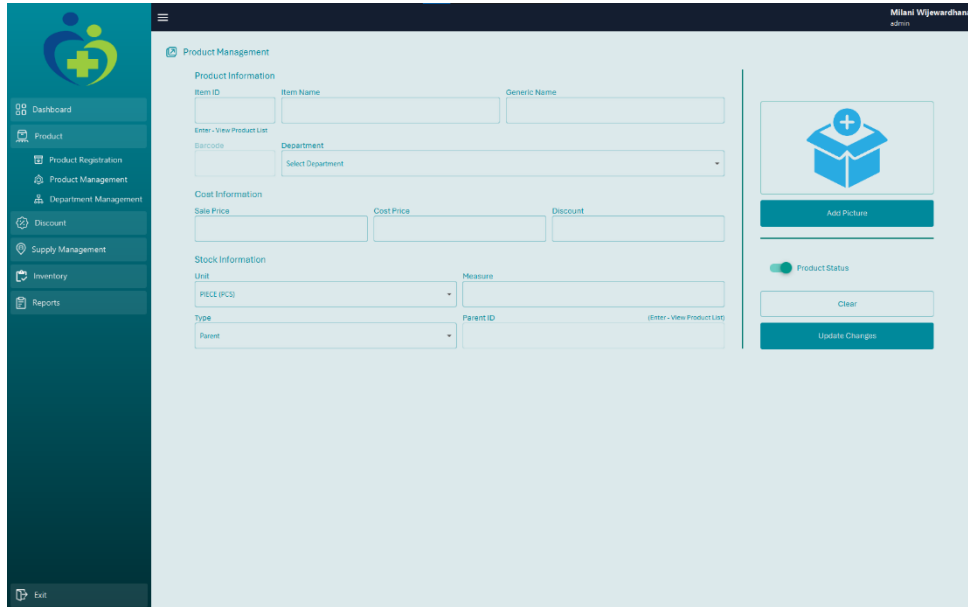

Register Button: Submits and saves the product details to the database.

Clear Button: Clears all fields to re-enter new product information (if available).

12. Admin Panel – Product Management

Description:

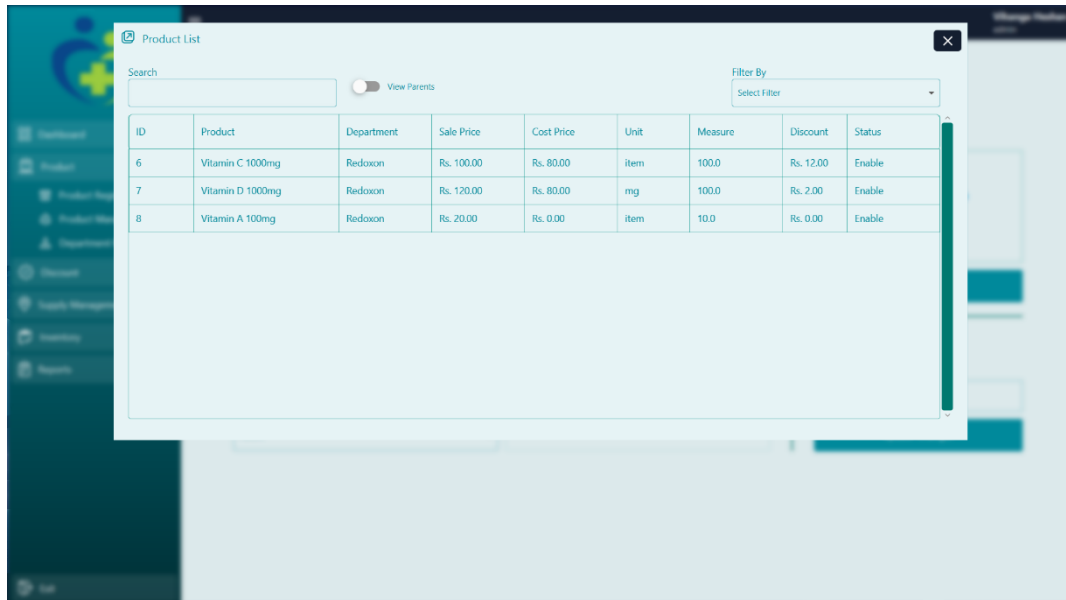

The Product Management screen allows the admin to view and update details of existing products in the system. It's designed for quick editing, price adjustments, and maintaining up-to-date inventory data. Admins can either select a product from a pop-up list or enter its ID directly to fetch and edit product details.

The screenshot displays the 'Product Management' interface. On the left is a dark teal sidebar with a logo at the top and a list of menu items: Dashboard, Product, Product Registration, Product Management (highlighted), Department Management, Discount, Supply Management, Inventory, and Reports. At the bottom of the sidebar is an 'Exit' button. The main content area has a dark header with the user's name 'Milani Wijewardhana' and the role 'admin'. Below the header, the 'Product Management' section is titled. It contains several input fields: 'Item ID', 'Item Name', 'Generic Name', 'Barcode', and 'Department' (a dropdown menu). There are also fields for 'Cost Information' including 'Sale Price', 'Cost Price', and 'Discount'. The 'Stock Information' section includes 'Unit' (a dropdown menu), 'Measure', 'Type' (a dropdown menu), and 'Parent ID' (with a link to 'Enter - View Product List'). On the right side of the form, there is a box with a plus icon and a box icon, an 'Add Picture' button, a 'Product Status' toggle switch, a 'Clear' button, and an 'Update Changes' button.

Elements Explained:

When the admin clicks on the Item ID field and presses the **Enter key** without typing anything, a pop-up appears showing a complete list of products in the system. This table lets the admin scroll through and select a product by simply clicking on its row. Once selected, all the product's details are automatically filled into the form on the page.

ID	Product	Department	Sale Price	Cost Price	Unit	Measure	Discount	Status
6	Vitamin C 1000mg	Redoxon	Rs. 100.00	Rs. 80.00	Item	100.0	Rs. 12.00	Enable
7	Vitamin D 1000mg	Redoxon	Rs. 120.00	Rs. 80.00	mg	100.0	Rs. 2.00	Enable
8	Vitamin A 1000mg	Redoxon	Rs. 20.00	Rs. 0.00	Item	10.0	Rs. 0.00	Enable

Alternatively, if the admin knows the specific **Item ID**, they can type it directly into the field and press the **Enter key**. The system will then auto-load the product information into the form, ready for editing.

After making the necessary changes, the admin clicks the **Update Changes button** to save the changes. If available, a **Clear button** allows them to clear the form and start over.

13. Admin Panel – Department Management

Description:

The Department Management screen allows the admin to register new product departments and update existing ones. These departments help organize products in the inventory and make it easier to filter or group items during billing, reporting, and stock control. This module ensures that products are properly categorized under their respective departments, such as Tablets, Syrups, Injections, etc.

The screenshot shows the 'Department Management' interface. On the left is a sidebar with a logo and navigation menu. The main area has a top bar with the user's name 'Vihanga Heshan admin'. Below this, the 'Department Management' section is active. It contains two panels: 'Department Registration' with a text input for 'Department Name' and 'Clear'/'Register' buttons; and 'Department Update' with inputs for 'Department ID' and 'Department Name', a link to 'View Department List', a status toggle (currently 'Active'), and 'Clear'/'Update Changes' buttons.

13.1 Department Registration

To register a new department, the admin simply types the desired department name into the input field labeled for department entry. Once the name is entered, clicking the **Register button** will save it to the system. The new department then appears in the list of existing departments below.

13.2 Department Update

When the administrator clicks on the **Department ID field** and presses the **Enter key** without typing anything, a pop-up appears showing the complete list of departments in the system. This table allows the administrator to scroll through and select a department by clicking on its row. Once selected, the form on the department details page will be automatically populated.

Alternatively, if the administrator knows the specific department ID, they can type it directly into the field and press the **Enter key**. The system will then automatically populate the form with the department information, ready for editing.

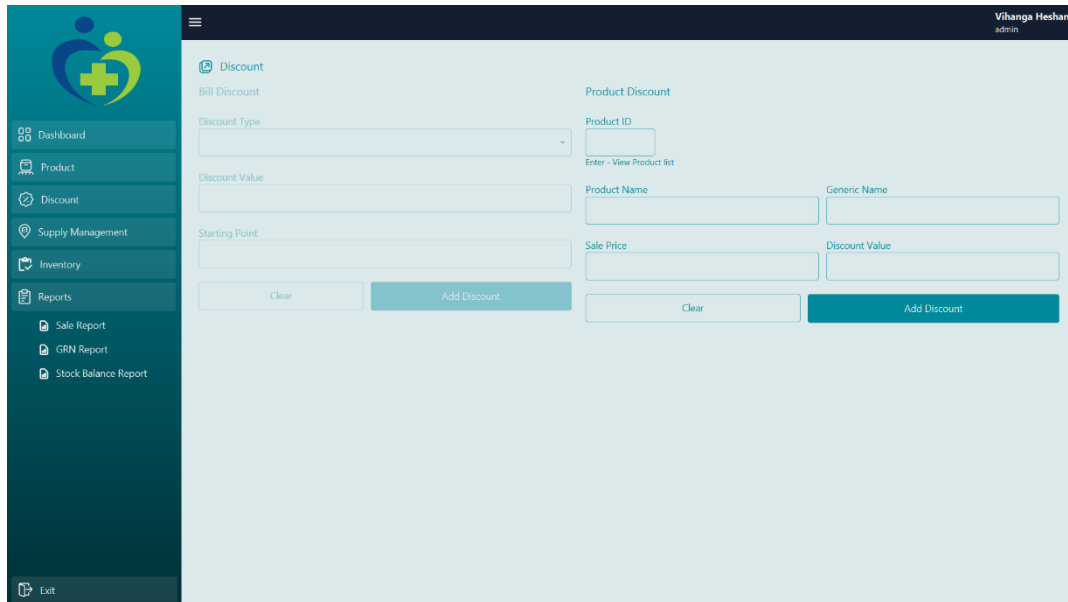

A department can also be Active or inactive by toggling the **toggle button** next to it.

After editing the name, the administrator clicks the **Update Changes button** to save the changes.

14. Admin Panel – Discount Page

Description:

The Discount Page allows the admin to assign discounts to individual products. These discounts are applied automatically during sales, reducing the price of the specific product at checkout. The system does not support bill-level discounts — only product-level discounts can be set.

The screenshot shows the 'Discount' page in the admin panel. The left sidebar contains navigation links: Dashboard, Product, Discount, Supply Management, Inventory, Reports (with sub-links for Sale Report, GRN Report, and Stock Balance Report), and Exit. The main content area is titled 'Discount' and has a sub-header 'Bill Discount'. It features a 'Discount Type' dropdown menu, a 'Discount Value' input field, and a 'Starting Point' input field. To the right, under 'Product Discount', there is a 'Product ID' input field with a 'View Product list' link below it, and a 'Product Name' input field. Below these, there are 'Sale Price' and 'Discount Value' input fields. At the bottom, there are 'Clear' and 'Add Discount' buttons for both the Bill and Product discount sections. The top right corner shows the user 'Vihanga Heshan' with the role 'admin'.

Product Discount Functionality:

Product ID Field:

Enter or search for the product's unique ID. Press **Enter** to load the product details.

Product Details Auto-Load:

After selecting a product, its name and current selling price will appear automatically for confirmation.

Discount Field:

Enter the amount of discount to apply to that product. This value will be deducted from the selling price during sales.

Add Discount Button:

Click this to save the discount. The system applies the discount automatically when the product is billed.

15. Admin Panel – GRN (Goods Received Note)

Description:

This GRN page is used by the admin to log new stock received from suppliers into the system. It captures key supplier details, product information, and pricing, which are essential for inventory accuracy and purchase tracking. It also allows loading past GRNs for reference or editing.

The screenshot shows the GRN Admin Panel interface. On the left is a sidebar with a logo and navigation links: Dashboard, Product, Discount, Supply Management, Inventory, GRN, Reports, and Exit. The main area is titled 'GRN' and contains the following fields and sections:

- Company:** A dropdown menu with 'Ex: ABC Company' selected.
- Supplier:** A dropdown menu with 'Ex: John Doe' selected.
- GRN ID:** A text input field with 'Ex: 12457823'.
- Product Entry Section (Top Grid Inputs):** A row of input fields for ID, Product Name, Generic Name, Cost Price, Qty, and Amount, followed by a blue button with a double arrow icon.
- Table:** A table with the following columns: ID, Product, Cost Price, Qty, and Amount. Below the table is a 'Discount' input field and a 'Total' input field.
- Buttons:** An 'Apply' button at the bottom right.

Elements Explained:

Company Dropdown (Ex: ABC Company)

A drop-down menu to select the supplier company delivering the goods. This ensures the stock received is correctly associated with the supplying organization.

Supplier Field (Ex: John Doe)

A field to select or search for the specific individual supplier or delivery representative related to the current stock receipt.

GRN ID Field (Ex: 12457823)

This field is used to either:

- View the GRN list (by pressing Enter), or load a previously saved GRN for review or editing.
- This feature is useful for referencing past entries.

Product Entry Section (Top Grid Inputs):

Here, the admin can enter the product information for each item received:

(Product ID, Product Name, Generic Name, Cost Price, Qty (Quantity), Amount)

Product List Table (Below Input Fields):

As products are entered, they appear in this list. This acts as a running record of all items included in the current GRN.

Delete Item:

To remove an unwanted item or correct a mistake

➤ *Simply **double-click** on the item in the GRN table*

Discount Field:

An optional field to apply a discount to the entire GRN total (e.g., if the supplier provided a bulk discount).

Total Field:

Automatically calculates the total value of all products received, minus any discounts.

Apply Button:

Finalizes the GRN entry. When clicked, the entered stock details are saved, and the inventory is updated accordingly.

This screen ensures:

- Proper tracking of incoming stock.
- Accountability by linking deliveries to suppliers.
- Accurate cost and inventory updates.
- A reference record for future reconciliation, stocktaking, or audits.

16. Admin Panel – Supplier Company Management

Description:

The Supplier Company Management screen allows the admin to register new supplier companies and manage existing ones. Supplier companies are the entities from which the pharmacy purchases stock. Maintaining this list ensures that inventory records are properly linked to their source and enables efficient supplier-related reporting and communication.

The screenshot displays the 'Supply Company Management' interface. On the left is a sidebar with navigation options: Dashboard, Product, Discount, Supply Management, Company Management, Supplier Management, Inventory, Reports, and Exit. The main area is divided into two sections. The 'Company Registration' section includes fields for Name, Address, Telephone 1, and Telephone 2 (optional), with 'Clear' and 'Add Company' buttons. The 'Company Management' section includes fields for ID, Name, Address, Telephone, and Telephone 2 (optional), with 'Clear' and 'Update Changes' buttons. The top right corner identifies the user as 'Vihanga Heshan' (admin).

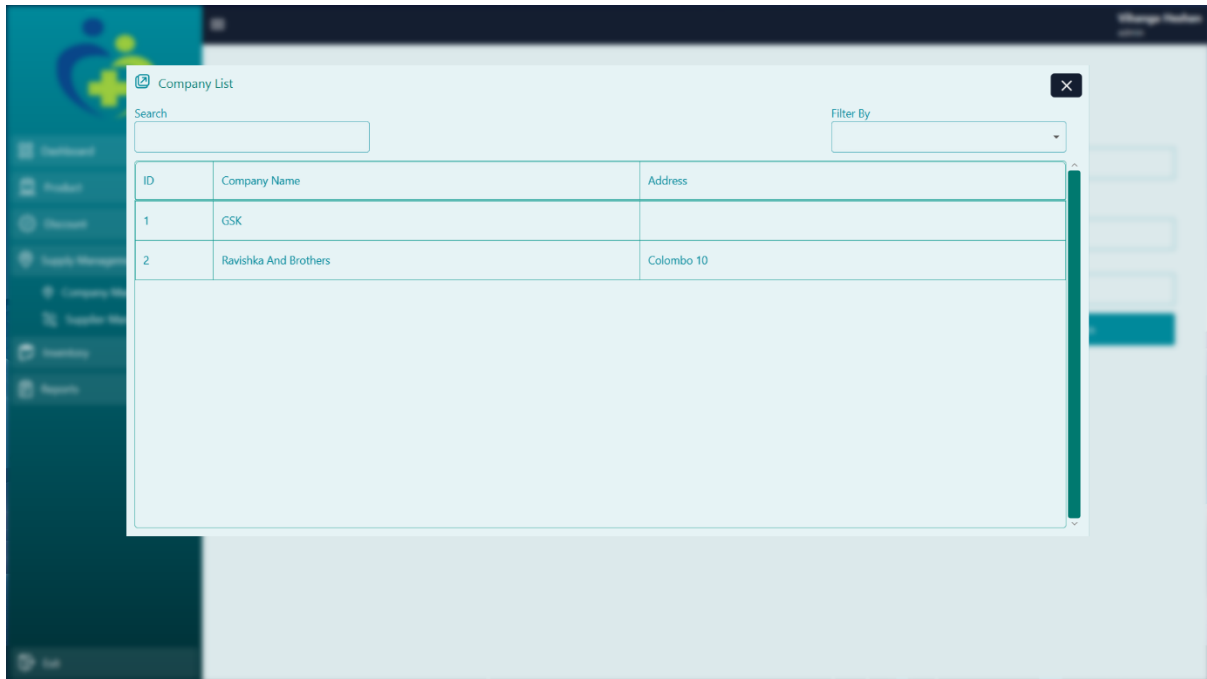

15.1. Company Register

This section is used to **add new supplier companies** to the system.

- The admin enters the **company name** into the input field.
- Additional optional fields may include **contact numbers** and **address**
- After entering the details, clicking the **Add Company** button saves the company to the database.
- The company becomes selectable in other modules, such as the GRN page and supplier linking.

15.2. Company Management

When the admin clicks on the **ID field** and presses the **Enter key** without typing anything, a pop-up appears showing an already registered Company list in the system. This table lets the admin scroll through and select a company by simply clicking on its row. Once selected, all the company's details are automatically filled into the form on the page.

Alternatively, if the admin knows the specific Company ID, they can type it directly into the ID field and press the **Enter key**. The system will then auto-load the Company information into the form, ready for editing.

Edit allows the admin to correct the name or update the company's contact details. Once edits are made, clicking the **Update Changes button** saves the changes.

17. Admin Panel – Supplier Management

Description:

The Supplier Management page is used to register and manage individual supplier representatives who are connected to supplier companies. These individuals are typically the sales agents or delivery personnel who handle transactions and logistics for stock deliveries.

This page ensures that each supplier is linked to a registered **supplier company** and maintains clear contact details for communication and tracking.

The screenshot displays the 'Supplier Management' interface. On the left is a sidebar with a logo and a menu including 'Dashboard', 'Product', 'Discount', 'Supply Management' (highlighted), 'Company Management', 'Supplier Management', 'Inventory', and 'Reports'. The main area is titled 'Supplier Management' and contains two forms. The 'Supplier Registration' form on the left includes input fields for 'Name', 'Telephone', and a 'Company' dropdown menu, with 'Clear' and 'Add Supplier' buttons. The 'Supplier Management' form on the right includes input fields for 'Id', 'Name', 'Telephone', a 'Company' dropdown menu (labeled 'Change Company'), and a 'Status' dropdown menu, with 'Clear' and 'Update Changes' buttons. The top right corner of the main area shows the user 'Vihanga Heshan' with the role 'admin'.

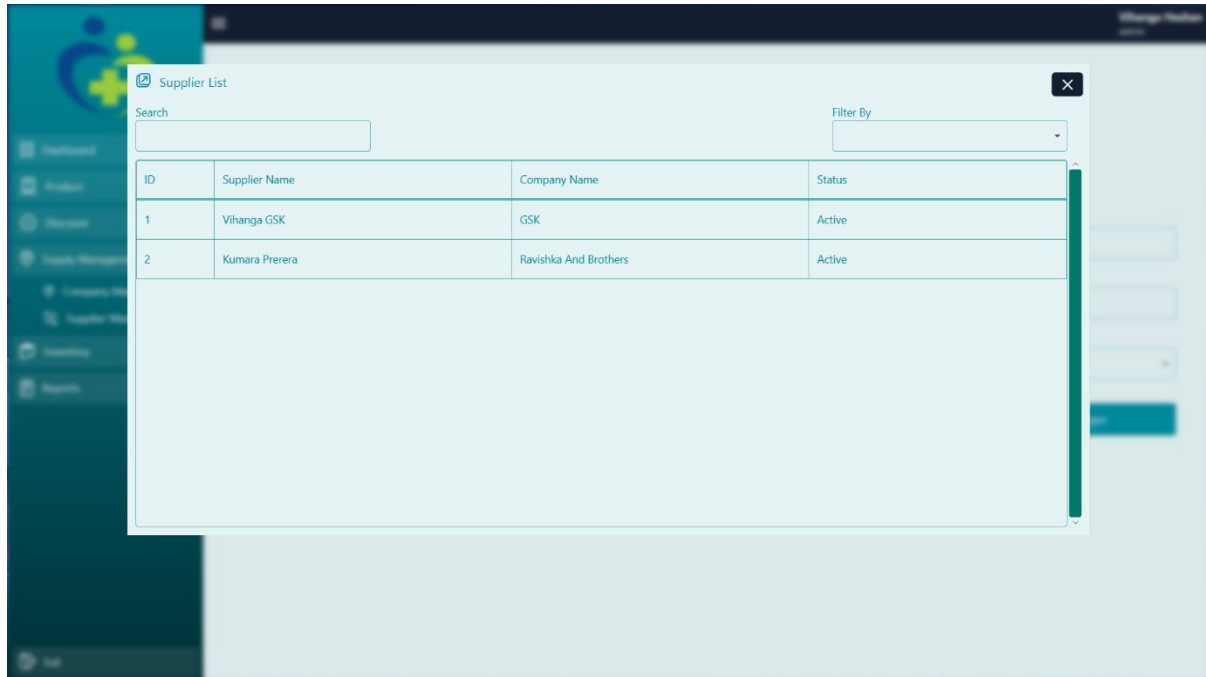

16.1. Supplier Register

This section is used to **add new supplier individuals** to the system.

- The admin begins by selecting a **Supplier Company** from a dropdown list (previously registered in the *Supplier Company Management* screen).
- Then, the admin enters the **Supplier Name**, which is the full name of the representative (e.g., *John Doe*).
- Additional fields such as **Contact Number**, **Address** may be included.
- After entering the necessary details, clicking the **Add Supplier** button saves the supplier to the system and links them with the selected company.

16.2. Supplier Management

When the admin clicks on the ID field and presses the Enter key without typing anything, a pop-up appears showing an already registered Supplier list in the system. This table lets the admin scroll through and select a supplier by simply clicking on its row. Once selected, all the supplier's details are automatically filled into the form on the page.

Alternatively, if the admin knows the specific **Supplier ID**, they can type it directly into the ID field and press the **Enter** key. The system will then auto-load the Supplier information into the form, ready for editing.

The admin can update details such as name or phone number, and then click the **Update Changes** button to save.

18. Admin Panel – Sales Report

Description:

The Sales Report page provides detailed insights into the pharmacy's sales activities over a selected period. Admins use this screen to generate, view, and review invoice records. It helps with tracking performance, identifying trends, auditing cashier activity, and generating data for business analysis.

This report is essential for both daily monitoring and end-of-period financial summaries.

The screenshot displays the 'Sales Report - Detailed' interface. On the left is a sidebar with a logo and navigation links: Dashboard, Product, Discount, Supply Management, Inventory, Reports, and Exit. The Reports section is expanded, showing 'Sale Report', 'GRN Report', and 'Stock Balance Report'. The main area has a 'Sales Date' filter set to '6/21/2025' and a 'Filter By' dropdown menu. A 'Load Report' button is present. Below these is a table with columns: ID, Invoice Number, Product Name, Unit Price, Qty, Amount, and Discount. The table is currently empty. At the bottom, there are four summary boxes: 'Total Sale' (Rs. 0.00), 'Total Cost' (Rs. 0.00), 'Total Discount' (Rs. 0.00), and 'Total Profit' (Rs. 0.00). There are also 'Refresh (F5)' and 'View Report' buttons.

Elements Explained

When the admin opens the Sales Report screen, the following key elements are available:

Date Range Filter:

This allows you to select a date to filter by.

Next filter dropdown field:

The dropdown field allows you to filter by ID, Invoice Number, Product Number, and Quantity.

Report Table Display:

Add filters and, after clicking the Load Report button, load the sales report details to the table.

View Report Buttons: Optional features for exporting the report to PDF for printing, filing, or further analysis.

19. Admin Panel – GRN Report

Description:

The GRN Report page allows the admin to view and review all previously entered Goods Received Notes (GRNs). Each GRN record contains essential information about the stock received, including the supplier, products, quantities, and costs.

This report is used for inventory audits, purchase tracking, and verifying supplier deliveries. It is especially useful during stock reconciliation and financial reporting.

The screenshot shows the 'GRN Report' page in the admin panel. On the left is a sidebar with a logo and navigation links: Dashboard, Product, Discount, Supply Management, Inventory, Reports, and an Exit button. The 'Reports' section is expanded, showing 'Sale Report', 'GRN Report', and 'Stock Balance Report'. The main content area is titled 'GRN Report' and contains a form with three input fields: 'Supplier' (a dropdown menu), 'GRN ID' (a text box), and 'Filter By' (a dropdown menu). A 'Load Report' button is to the right of these fields. Below the form is a table with the following columns: ID, Product Name, Cost Price, Qty, and Amount. The table is currently empty. At the bottom of the page, there are two input fields for 'Total Amount' and 'Discount', both showing 'Rs. 0.00'. To the right of these are two buttons: 'Refresh (F5)' and 'View Report'.

Elements Explained

Supplier Dropdown:

Let's the admin filter GRNs by selecting a specific supplier. Only GRNs associated with the selected supplier will be shown in the results.

GRN ID Field:

Used to search for a specific GRN by its unique ID. This is helpful when reviewing or auditing a particular stock receipt.

Filter By Dropdown:

Provides additional filtering options such as by ID, Product Name, Quantity, and Cost Price. Helps narrow down report results based on specific criteria.

Load Report Button:

After selecting the filter options (supplier, GRN ID, etc.), clicking this button fetches the relevant GRN records and displays them in the table below.

Report Table (Below Filter Section):

Once the report is loaded, this table displays a list of products included in the selected GRNs.

The Total Amount field at the bottom left displays the combined value of all products listed in the GRN report. Next to it, the Discount field shows any discounts that were applied during the GRN entry, helping with accurate financial reconciliation and purchase tracking.

View Report Button:

Opens a detailed view or a printable version of the GRN report (depending on implementation). This may allow exporting or generating a summary.

20. Admin Panel – Stock Balance Report

Description:

The Stock Balance Report screen allows the admin to view the current inventory levels of all registered products. It is used to check available stock quantities, identify low-stock items, and monitor product availability based on departments.

This report includes a toggle switch that changes how the data is loaded into the table.

The screenshot shows the 'Stock Balance Report' interface. On the left is a sidebar with a logo and a menu containing: Dashboard, Product, Discount, Supply Management, Inventory, Reports (with sub-items: Sale Report, GRN Report, Stock Balance Report), and Exit. The main area has a title 'Stock Balance Report' and a toggle switch 'View Full Stock' (currently unchecked). To the right of the toggle are two dropdown menus: 'Department' (with 'Select Department' as the placeholder) and 'Filter By' (with 'Select Filter' as the placeholder). A 'Load Report' button is to the right of these dropdowns. Below the filters is a table with the following columns: ID, Department, Product, Qty, Cost Price, Sale Price, and Profit. The table body is currently empty. At the bottom of the interface, there are three summary boxes: 'Total Stock Value' (Rs. 0.00), 'Total Sale Value' (Rs. 0.00), and 'Total Profit' (Rs. 0.00). To the right of these boxes are two buttons: 'Refresh (F5)' and 'View Report'.

Screen Functionality:

Toggle Button (View Full Stock):

When this switch is enabled (ticked), the system will ignore department filters and load the entire stock list across all departments once the **Load Report button** is clicked.

Department Dropdown:

When the toggle button is disabled (unticked), the admin must select a department from the

dropdown menu. Clicking **Load Report** in this mode will display only the stock items related to the chosen department.

Load Report Button:

This button generates the report based on the toggle/department selection and loads the matching stock items into the report table below.

The **Total Stock Value**, **Total Sale Value**, and **Total Profit fields** show the overall cost, selling value, and profit of the current stock.

The **Refresh button** reloads the page, and **View Report** generates a detailed stock report.

Conclusion

Congratulations! You've now reached the end of the **Pharmacy POS System User Manual**. This guide has provided you with a comprehensive walkthrough of the system's features, from cashier operations to advanced administrative controls.

By following this manual, you should now be able to:

- **Efficiently process sales** using the Cashier Panel.
- **Manage inventory** with Goods Received Notes (GRNs) and stock reports.
- **Update product details**, set discounts, and organize departments.
- **Track suppliers** and maintain accurate purchase records.
- **Generate and analyze reports** for sales, GRNs, and stock balance.

This system is designed to **streamline pharmacy operations, reduce errors, and enhance productivity**. Whether you're handling daily transactions, restocking inventory, or reviewing business performance, the tools provided will help you maintain accuracy and efficiency.

Need Further Assistance?

If you encounter any issues or have questions not covered in this manual, please contact your system administrator or technical support team for help.

Final Notes

- **Always log out** after your session to ensure security.
- **Regularly check reports** to monitor sales trends and stock levels.
- **Keep supplier and product details updated** for smooth operations.

Thank you for using the **Pharmacy POS System**. We hope this tool enhances your workflow and contributes to your pharmacy's success!

Happy Managing! 🚀💊
